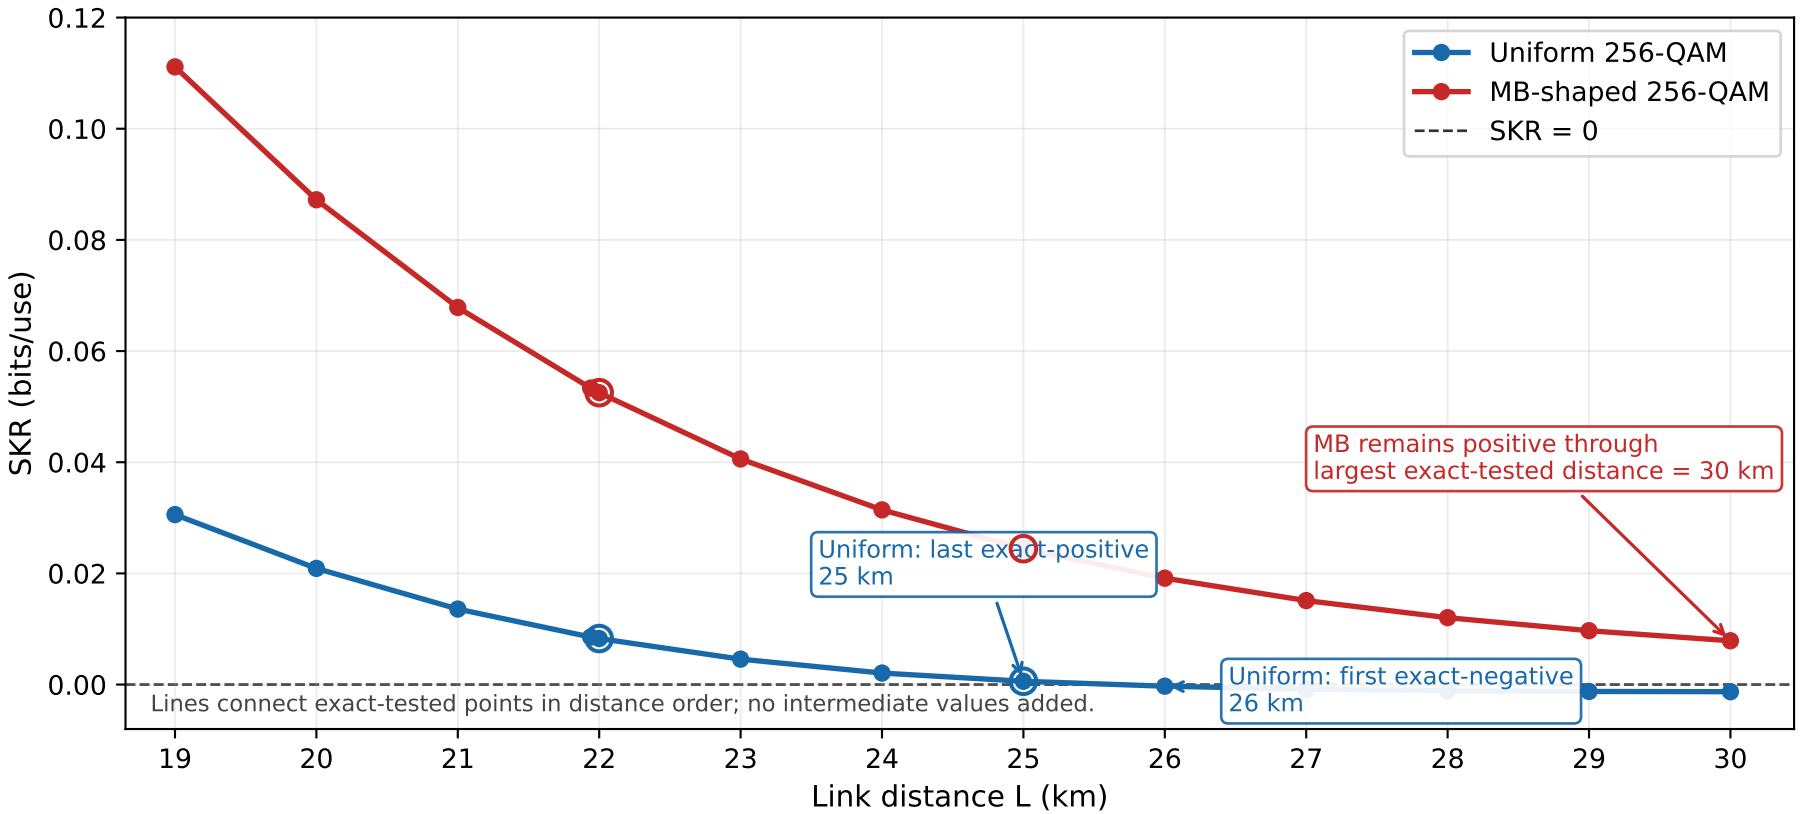
Positive-SKR vs Link Distance (Diagnostic-Only, Exact-Tested)

Revised baseline: w0 = 0.10 m, D_r = 0.55 m, epsilon_ch = 0.0186 SNU, beta = 0.95, heterodyne, reverse reconciliation.

Common feasible budget: V_A <= 1.5, AO OFF, phase noise OFF.



```
22 km: Uniform=0.0082792999 | MB=0.0525096288 | gain=0.0442303289455 bits/use
25 km: Uniform=0.0005911191 | MB=0.0244440880 | gain=0.0238529688261 bits/use
```

MB best feasible exact candidate at 22 and 25 km: V_A=1.3833230303, nu_raw=0.2, nu_repo=8.5. Advantage is driven mainly by larger beta I_AB; lower chi_BE helps at 22 km.

Diagnostic-only redraw using exact-tested common-feasible candidates only. No interpolation. No new moments. No rerun of channel/security evaluation.

Binomial omitted: no safe current-compatible exact C,w dataset.
