HAP--UAV Channel Transmittance Distribution
Mixed law: $p_T = p_{out}\delta_0 + p_{in}p_{active}$
$P(T=0) = 0.25$: Dirac mass
continuous mass $p_{in} = 0.75$
$p_{\text{in}}p_{\text{active}}(\eta)$
Outage-inclusive mean $\langle\eta\rangle = 0.0192$
$P(T=0) = 0.25$
Probability density
Discrete probability mass
Channel transmittance $\eta = T$
